Generating
Facility Address:

Electric Utility
Account Number: _____

Daytime Phone: _____

Email: _____

Consistent with City of Ashland Resolution #2017-28, the City of Ashland and its Customer/Generator agree as follows:

- All systems will be installed so as to comply with the Ashland Municipal Electric Utility Design Requirements for Interconnection of Customer owned, grid connected renewable energy generating facilities and will enter into an interconnection agreement with the City of Ashland.
- For Net Metered systems, a single electric meter will be supplied by the Municipal Electric Utility that measures the net of both consumption and generation. Net electricity generated will be carried forward each billing cycle where a surplus exists. Accumulated net electricity will be converted from a kilowatt to dollar amount credit each based on the Municipal Utility's wholesale rate on the next available billing cycle after March 31 of each year.
- For Virtual Net Metered systems, a separate production meter for the generating system will be supplied by the Municipal Electric Utility to measure the total electricity generated from the system. Owners of virtual net metered systems must provide the Municipal Electric Utility with a completed allocation agreement describing the percentages of the monthly generation allocated to each of the listed benefitting accounts within the Municipal Utility service territory.
